Casey Barton

Honolulu, HI · (808) 936-5654 · glacier.equilibrium@gmail.com · github.com/GlacierEQ · casey-barton-glaciereq.vercel.app

PROFILE

I build the components that hold up under real load: production data pipelines, LLM applications, agents, and workflow automations — shipped as runnable, maintainable code the client can operate after the engagement ends. Every engagement feeds back into reusable accelerators, patterns, and points of view: I feed the blueprint, not just the invoice.

Three years as a founder running an evidence-grade agent control plane from Honolulu: hand-rolled multi-agent loops with function calling, structured outputs, typed handoff contracts, retrieval over my own estate, 65 MCP connectors, and an eval-harness discipline on every agent shipped. Remote-first; client-embedded.

CORE COMPETENCIES

Engineering: Python · TypeScript · Node.js · SQL · Bash · REST APIs · webhooks · containers · GitHub Actions (CI/CD) · Supabase · Postgres

AI & Agents: LLM application development · RAG pipelines · hand-rolled multi-agent loops · function calling · structured outputs · workflow automations · LLM evaluation harnesses · replay loops · guardrails · fail-closed recovery · MCP protocol · prompt & context engineering

Delivery: client-embedded scoping · demos & POCs · testing discipline · monitoring & observability · latency & token-cost benchmarks · verification gates · audit receipts · idempotent automation · documentation & handover

EXPERIENCE

Founder / Applied AI Systems Architect 2023 – Present

GlacierEQ — Honolulu, HI

- Ship production LLM applications, agents, and workflow automations with typed tool schemas, structured outputs, and retrieval — backed by a **989-test** control plane, **95/95** verification checks green.
- Run an eval-harness discipline on every agent shipped: prompt and configuration changes validated by eval harnesses with replay loops before anything touches production — fail-closed by default, never guess.
- Integrate **65 MCP connectors** plus APIs, webhooks, and data pipelines into environments I don't own — evidence boundaries and audit receipts built for client-cloud compliance regimes.
- Turn ambiguous work into working software with limited supervision: scope with operators, build the narrow end-to-end proof, ship runnable and maintainable code others can operate after handover.
- Build reusable accelerators deliberately: every engagement's learnings feed back into durable patterns for claim tracking, evidence boundaries, audit receipts, and human-in-the-loop control across a **1,413-repository** estate.
- Own outcomes against business impact, not just shipped code: KPIs, baselines, and instrumentation agreed before deployment, then delivered against them.

EDUCATION

University of Hawaii at Manoa 2016
Bachelor of Science

AWS Cloud Institute 2025
Cloud Computing program

Colorado State University
Undergraduate coursework

SELECTED PROOF

Job-App Helix — attributable campaign engine

- Composes assessments into campaign-level **GO / NO-GO** with immutable evidence models, stable finding codes, and fail-closed decisions.
- Recovery restricted to contingency evidence declared before reassessment — the engine never silently tunes values until they pass.

GlacierEQ estate — agent systems portfolio

- Durable patterns for claim tracking, evidence boundaries, audit receipts, and human-in-the-loop control across the full estate.
- Connects multiple technical surfaces — agents, APIs, databases — into one coherent, verifiable working system.

SKILLS

Languages: Python · SQL · TypeScript · Bash · JavaScript / Node.js

AI / Agents: LLM application development · RAG pipelines · hand-rolled multi-agent loops · function calling · structured outputs · workflow automations · evaluation harnesses · MCP protocol · typed handoff contracts · prompt & context engineering

Delivery: client-embedded delivery · demos & POCs · testing discipline · monitoring & observability · verification gates · audit receipts · idempotent automation · documentation & handover

Evidence boundary: portfolio repositories are independent work. Domain-inspired demonstrations are not claims of company affiliation, production deployment, or certification.
