# Casey Barton

Honolulu, HI · (808) 936-5654 · glacier.equilibrium@gmail.com · github.com/GlacierEQ · casey-barton-glaciereq.vercel.app

## PROFILE

Forward-deployed AI agent builder based in Honolulu. I embed with the people whose problems I'm solving — run the demo, own the integration, tune the agent until it holds up in their production — then feed what the deployment taught me back into the platform.

Three years running an evidence-grade agent control plane: LLM agent frameworks, function calling, retrieval-augmented generation, prompt and configuration optimization, API/CRM/database integrations, performance monitoring with A/B testing, fail-closed recovery. Remote-first; open to travel for enterprise deployments.

## CORE COMPETENCIES

**Engineering:** Python · TypeScript · Node.js · SQL · Bash · REST APIs · webhooks · Supabase · Postgres · Vercel · GitHub Actions (CI/CD) · containers

**AI & Agents:** LLM agent frameworks · function calling · RAG · prompt & context engineering · MCP protocol · multi-agent orchestration · LLM evaluation harnesses · human-in-the-loop control

**Deployment:** customer-embedded scoping · demos & proof-of-concepts · performance monitoring · A/B testing · verification gates · audit receipts · idempotent automation · fail-closed recovery

## EXPERIENCE

**Founder / Applied AI Systems Architect** 2023 – Present

*GlacierEQ — Honolulu, HI*

- Develop, configure, deploy, and optimize production AI agents across a **1,413-repository** platform: agent governance, MCP integrations, context externalization, document workflows, infrastructure modeling.
- Operate a **989-test** agent control plane — typed state transitions, approval gates, recoverable runs — with **95/95** verification checks green; prompt and configuration tuning validated before anything ships.
- Integrated **65 MCP connectors** plus APIs, webhooks, and data pipelines connecting customer environments to a platform and back — the exact integration surface this role owns.
- Run demos and proof-of-concepts, gather technical requirements, define milestones and implementation plans, and coordinate execution end to end — the field pattern this role describes.
- Feed deployment learnings into the product roadmap: identify gaps, build custom tooling, and turn real-world failure modes into platform capabilities that maximize customer ROI.
- Serve as the trusted technical advisor for operators and stakeholders: architecture design, security considerations, scalability planning — translated into decisions non-technical clients use the same day.

## EDUCATION

**University of Hawaii at Manoa** 2016

*Bachelor of Science*

**AWS Cloud Institute** 2025
*Cloud Computing program*

**Colorado State University**
*Undergraduate coursework*

## SELECTED PROOF

**Job-App Helix — attributable campaign engine**

- Composes assessments into campaign-level **GO / NO-GO** with immutable evidence models, stable finding codes, and fail-closed decisions.
- Recovery restricted to contingency evidence declared before reassessment — the engine never silently tunes values until they pass.

**GlacierEQ estate — agent systems portfolio**

- Durable patterns for claim tracking, evidence boundaries, audit receipts, and human-in-the-loop control across the full estate.
- Connects multiple technical surfaces — agents, APIs, databases — into one coherent, verifiable working system.

## SKILLS

**Languages:** Python · TypeScript · SQL · Bash · JavaScript / Node.js

**AI / Agents:** LLM agent frameworks · function calling · RAG · MCP protocol · multi-agent orchestration · LLM evaluation · prompt & context engineering

**Data & Infra:** Supabase · Postgres · Vercel · GitHub Actions · REST APIs · webhooks · containers

**Practice:** demos & POCs · A/B testing · performance monitoring · verification gates · audit receipts · idempotent automation

*Evidence boundary: portfolio repositories are independent work. Domain-inspired demonstrations are not claims of company affiliation, production deployment, or certification.*
