Casey Barton

Honolulu, HI · (808) 936-5654 · glacier.equilibrium@gmail.com · github.com/GlacierEQ · casey-barton-glaciereq.vercel.app · linkedin.com/in/caseybartonai

PROFILE

Customer-facing builder with the full FDE motion: discovery, scope and success criteria, production integrations and AI workflows shipped against real data and unreliable APIs, and recurring customer needs turned into reusable connectors and platform capabilities — not one-offs left behind at accounts. Three years as a founder doing exactly this: write the code, make the technical decisions, stay accountable for the outcome, from Honolulu.

My reusable-connector discipline is concrete: **65** authored MCP connectors with typed contracts and structured validation — integrations built once and reused across every engagement. Quality is eval-gated before anything ships: golden datasets, behavioral assertions, LLM-as-a-judge with written rubrics, fail-closed recovery. Honest on scope: no weight fine-tuning claimed — eval-driven selection and routing is the proven part; founder/operator (three years, 2023–present), honestly stated. No enterprise logos claimed; demos and POCs are founder-scale, honestly stated.

CORE COMPETENCIES

Customer implementation: technical discovery · scope & success-criteria framing · customized demos from real workflows · production integrations · deployment & iteration · operator/executive communication

Reusable platform building: recurring needs → reusable connectors · 65 authored MCP connectors · typed contracts · platform capabilities & developer experience · field-to-product feedback loops

Agentic AI: AI agents on real data · workflows & automation · tool use & function calling · structured outputs · MCP · guardrails · fail-closed recovery · human-in-the-loop gates

Engineering: Python (primary) · TypeScript · SQL · REST APIs · Postgres · databases & integrations · CI/CD (GitHub Actions) · observability · latency & token-cost instrumentation · retry logic

EXPERIENCE

Founder / Applied AI Systems Architect 2023 – Present
GlacierEQ — Honolulu, HI

- Own customer implementations end to end: lead discovery, define scope and success criteria, design the solution, take it through deployment and iteration — the full path from 'here's how the business works' to a live, reliable implementation.
- Ship production systems against real data: integrations, workflows, and AI agents handling unreliable APIs, edge cases, and operational constraints — measured before and after, not vibes.
- Build the product, not just one-off solutions: turn recurring customer needs into reusable connectors, platform capabilities, and better developer experience — **65** governed MCP connectors as the standing proof of that discipline.
- Build demos that make the value concrete: prospect workflows turned into working demonstrations with declared success criteria — field friction instrumented and written into engineering-ready requirements.

• Gate quality with evaluation harnesses: golden datasets, behavioral assertions, LLM-as-a-judge with written rubrics — **989-test** suite, **62/62** verification checks green across an **1398-repository** estate (live-verified 2026-10-20).

• Write the code, make the technical decisions, stay accountable for the outcome: founder/operator delivery, three years — ambiguity in, working software out, without waiting for detailed instructions.

EDUCATION

University of Hawaii at Manoa **2016**
Bachelor of Science

AWS Cloud Institute 2025
Cloud Computing program

Colorado State University
Undergraduate coursework

SELECTED PROOF

Governed integration layer — 65 authored MCP connectors

• Governed tool/API/data-source connections with typed contracts — the reusable-connector discipline the role asks for, proven across every engagement.

Evaluation-gated quality — shipped measured

• Eval harnesses with written rubrics gate every deployment: judged criteria declared up front, behavioral assertions enforced, trace intelligence feeding iteration.

Customer-first delivery

• Three years of founder/operator embedded delivery: discovery, customized demos, solution design, deployment and iteration — customer-first with good questions and clear communication.

SKILLS

Languages: Python · TypeScript · SQL · Bash · JavaScript / Node.js

Integrations: 65 authored MCP connectors · REST APIs · CRM/database integration patterns · real-time sync posture · structured validation

Agentic AI: AI agents · workflows & automation · tool/function calling · MCP · structured outputs · eval harnesses · fail-closed recovery

Production: Postgres · CI/CD (GitHub Actions) · observability · latency & token-cost instrumentation · retry logic · technical writing

Evidence boundary: portfolio repositories are independent work. Founder/operator depth (three years, 2023–present), honestly stated — no enterprise customer logos, no enterprise-account track record invented. No weight fine-tuning claimed — model strategy is eval-driven selection and routing. No Go / GCP / GraphQL / K8s / Terraform / data-science-statistics depth claimed. No enterprise customer logos or enterprise-account track record claimed. Travel (US + SF office) is a JD core requirement — see REVIEW_REQUIRED.txt; Honolulu-based, his call.
